SafeConnect Access – Mobile Devices

These instructions are for all mobile devices (phones, ipad, etc...).

1. On your device, select the University’s network `uofm` from the list of available wireless networks. Depending on your device, this list will automatically appear, or you will need to go to your device settings.

2. After you are connected to the network, open an internet browser (Safari, Firefox, etc...).

   You should now have access to the University wireless network on your mobile device.

   **NOTE:** If you cannot access the internet, restart your device and try opening an internet browser again.

If you encounter a problem, please bring the device to the umTech Service Desk located in Administration Bldg. room 100, **Walk-In Hours:** 8 am - 7 pm, Monday – Friday.
