These instructions are for installation of the AnyConnect Virtual Private Network (VPN) Client on a Macintosh and using it to connect to the University of Memphis network.

You must be logged into your computer or laptop as an **Administrator** to install the AnyConnect VPN client.

1. Go to: [https://securepoint.memphis.edu](https://securepoint.memphis.edu) and log in using your UUID and password (this is the same password that you use for umMail, umDrive, and all other campus resources).

2. Click **Continue**.

3. In the left navigation bar, click **Install VPN Client**.

4. Click **Start AnyConnect**.
At this point:

- If you receive a pop-up notification about an applet requesting unrestricted access to your computer, click Allow.

- You may receive a window asking for your Name and Password. You will need to be an Administrator on your computer in order to install the VPN.

5. The AnyConnect VPN client will install and then will automatically connect to the University's secure network.

When the installation is complete and you have successfully connected to the VPN, the yellow lock VPN icon will appear in your desktop toolbar.

You will remain connected to the VPN until you disconnect, turn off your machine, or allow your Internet connection to idle for more than 30 minutes.

If you need additional assistance, contact the umTech Service Desk at 901.678.8888.
